Web Development Activity Based Learning

Project Title: SweetBites Bakery Website

Description

SweetBites is a responsive bakery website created using HTML and CSS. It presents the bakery's best-selling cakes, pastries and cookies with prices, a custom cake section, a seasonal 20% offer, a photo gallery and contact details. The project uses a separate stylesheet, Flexbox and Grid layouts, hover effects and media queries, so that the page looks good on computers, tablets and mobile phones.

1. Introduction

This activity introduces the two core technologies of the web: **HTML** (HyperText Markup Language), which defines the content and structure of a page, and **CSS** (Cascading Style Sheets), which controls how that content looks. The project is a website for a fictional bakery called **SweetBites**. Unlike a page with inline styles, the HTML (*bakery.html*) and the CSS (*bakery.css*) are kept in two separate files and connected with a **link** tag. The page presents the bakery's best sellers with prices, custom cake designs, a seasonal offer, a photo gallery and contact details.

Objectives

- To build a complete multi-section web page using semantic HTML tags and class names.
- To keep content and styling in separate files by linking an external stylesheet.
- To arrange content with CSS Flexbox and CSS Grid (navigation bar, product cards, gallery, footer).
- To add hover effects and smooth transitions that make the page feel interactive.
- To make the page responsive, so that it adapts to tablets and mobile phones using media queries.

Website Sections at a Glance

Section	Purpose
Navigation Bar	Shows the SweetBites logo and tagline and links to every main section.
Hero Section	Welcome message, heading, short text and an "Order Now" button beside a large cake photo.
Categories	Five round icon links: Cakes, Pastries, Cookies, Custom Cakes and Special Offers.
Our Best Sellers	Five product cards with a photo, name, price and an order button.
Custom Cake Designs	A photo and text inviting visitors to design a personalised cake.
Seasonal Offer	A gradient banner announcing 20% off all cakes and pastries.
Our Gallery	A row of five bakery photographs.
Footer	Quick links, contact details, social media names, an e-mail button and the copyright line.

2. HTML Source Code (bakery.html)

The screenshots below show the HTML file in the code editor, followed by the complete source listing.

Source Code in the Editor

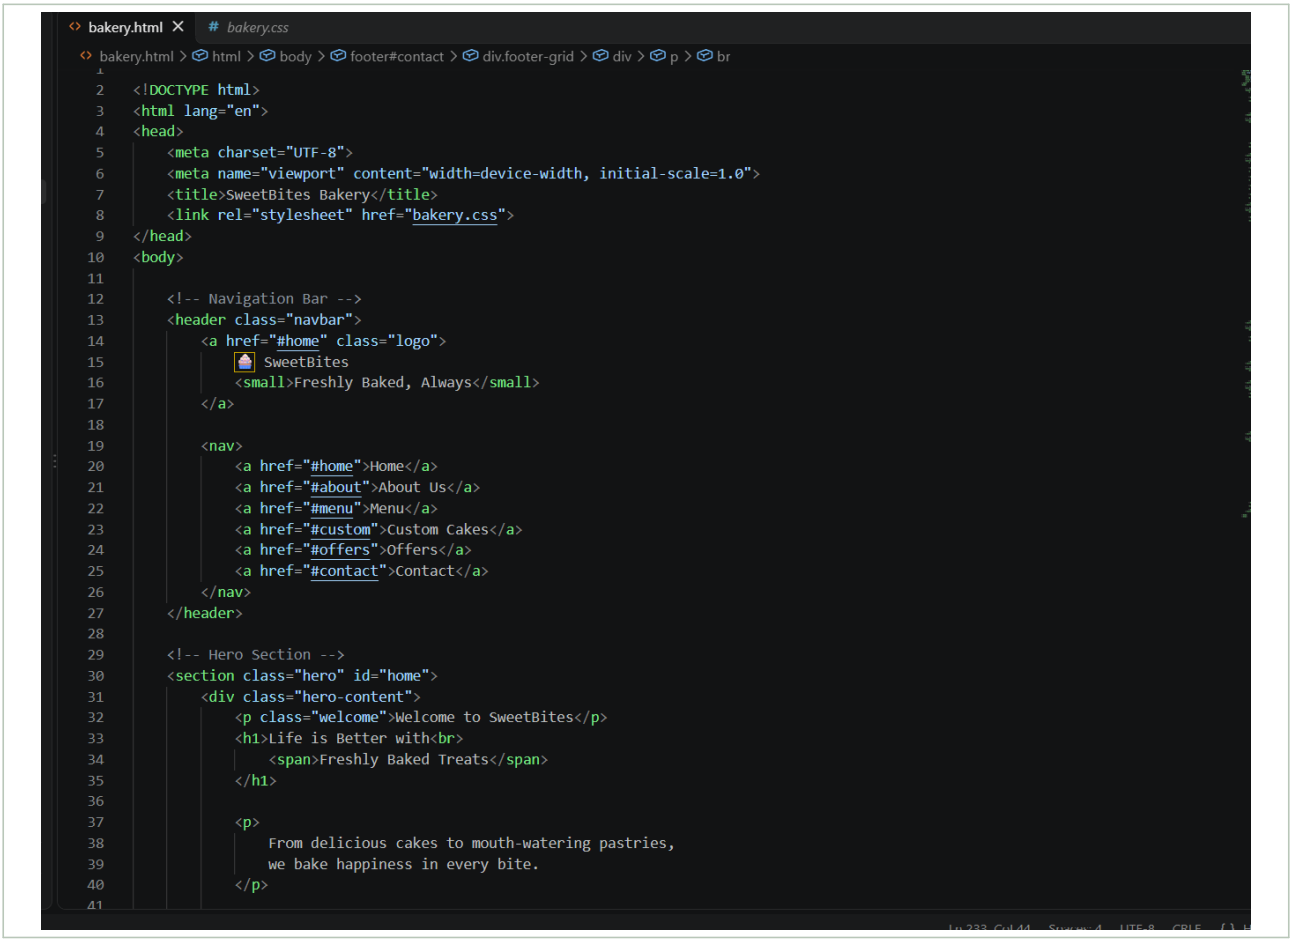

Figure 1: bakery.html in the code editor - document head, navigation bar and start of the hero section (lines 2-40)

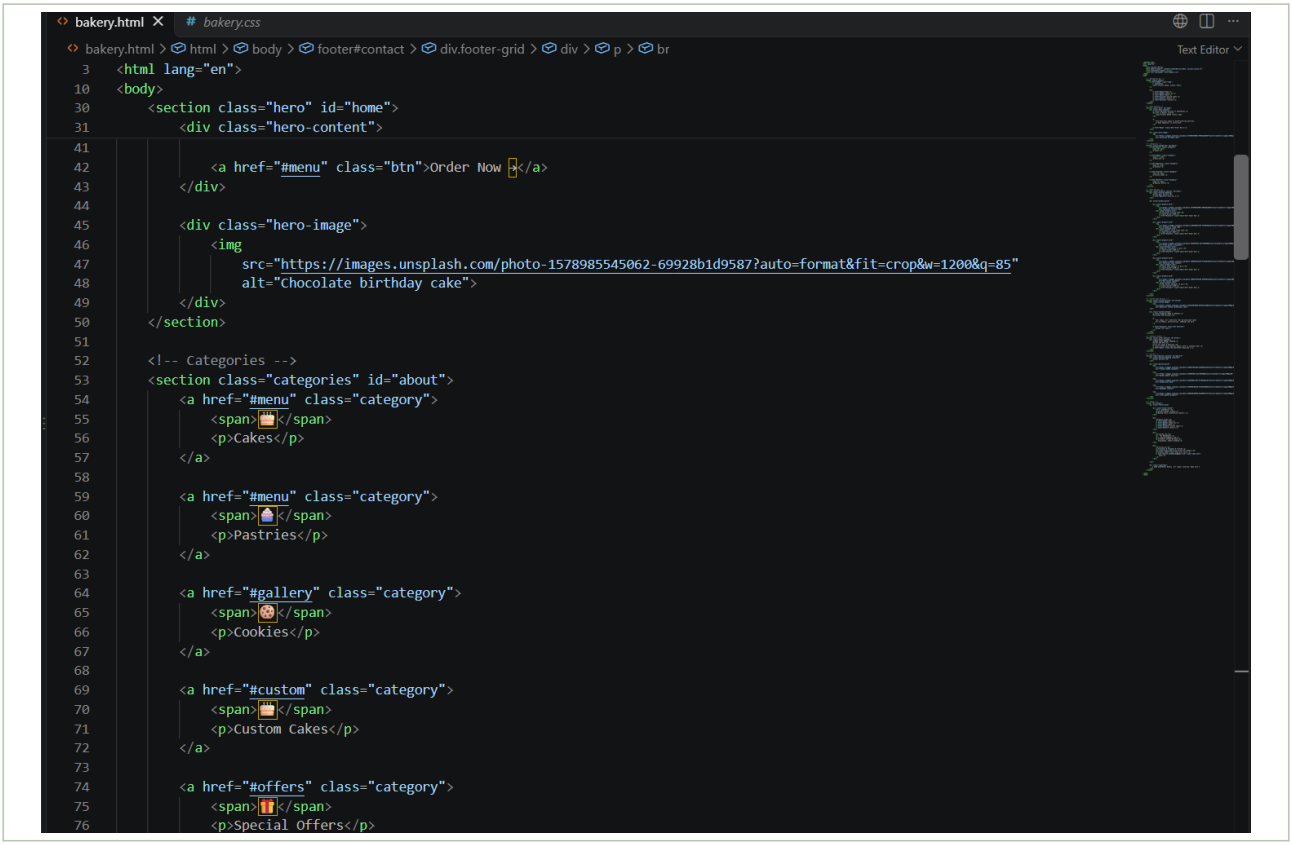

Figure 2: bakery.html in the code editor - hero image and the Categories section (lines 41-76)

Complete Source Listing

Note: emoji and some symbols in the original file are shown here as HTML character codes (for example 🧁 stands for the cupcake emoji), because the PDF code font cannot draw them. The browser displays them normally.

3. Description of the HTML Code

Document Structure

The file begins with **<!DOCTYPE html>**, which tells the browser to treat the file as modern HTML, and **<html lang="en">**, which declares that the page is in English. The **<head>** contains information about the page: **<meta charset="UTF-8">** lets the browser display emoji and the rupee symbol correctly, the **viewport** meta tag makes the page scale properly on mobile screens, **<title>** sets the browser-tab text "SweetBites Bakery", and **<link rel="stylesheet" href="bakery.css">** connects the external stylesheet. Everything visible is placed inside **<body>**. Comments such as *<!-- Hero Section -->* label each section.

Tags and Attributes Used

Tag / attribute	Where it is used	Purpose
<header>, <nav>, <section>, <footer>	Top bar, menu, content blocks, page bottom	Semantic tags that describe the role of each part of the page.
<h1>, <h2>, <h3>	Hero title, section titles, card and footer titles	Headings in decreasing order of importance.
<p>, , <small>, 	Text, emoji icons, tagline, line breaks	Paragraphs and inline text; span and small allow separate styling of part of a line.
<a href>	Menu, buttons, category links, footer	Links. "#menu" jumps to the section with id="menu"; "mailto:" opens an e-mail draft.
<img> with src and alt	Hero, product cards, custom cake, gallery	Displays a photo; alt gives a text description for accessibility.
	Hero content, cards, footer columns	A general container used to group content.
class attribute	navbar, hero, product-card, btn, ...	Names an element so CSS rules can target it. Many elements can share one class.
id attribute	home, about, menu, custom, offers, gallery, contact	Unique name that lets links jump to a section.

Section-by-Section Explanation

- **Navigation bar:** a <header> with class "navbar" holds the logo link (emoji, name and a <small> tagline) and a <nav> with six links: Home, About Us, Menu, Custom Cakes, Offers and Contact.
- **Hero section:** two blocks side by side. "hero-content" has the welcome line, an <h1> with a
 line break and an italic , a short paragraph and an "Order Now" button link. "hero-image" holds the chocolate cake photo.
- **Categories:** five links of class "category", each with an emoji inside a and a label (Cakes, Pastries, Cookies, Custom Cakes, Special Offers).
- **Best sellers:** a heading row with a "View All" link and five "product-card" blocks. Each card has an image, a product name and a price (Rs. 699, 649, 299, 199 and 249) and an "Order Now" link.
- **Custom cake section:** an image block and a content block with the label "MAKE IT SPECIAL", the heading "Custom Cake Designs", a paragraph and a "Design Your Cake" button.

- **Seasonal offer:** the text "Get 20% OFF on All Cakes & Pastries" with a note and a "Shop Now" button.
- **Gallery:** a heading and five images, each with alt text.
- **Footer:** four columns in "footer-grid": brand, Quick Links, Contact Us (phone, e-mail, address) and Follow Us with a "mailto:" Email Us button, followed by a copyright line.

    }
}
```

5. Description of the CSS Code

How the Stylesheet Works

A CSS rule has the form **selector { property: value; }**. The selector chooses which elements are styled, for example *.navbar* (all elements with class "navbar"), *.logo small* (a small tag inside the logo) or *.navbar nav a:hover* (a menu link while the mouse is over it). Because the file is linked from the HTML head, one stylesheet styles the whole page, and a change made in one place is applied everywhere.

General Settings

- *** { margin:0; padding:0; box-sizing:border-box; }** removes the browser's default spacing and makes widths include padding, which keeps layouts predictable.
- **html { scroll-behavior: smooth; }** makes clicking a menu link scroll smoothly to the section.
- **body** sets Arial as the font, a creamy background (#fffaf6) and a dark brown text colour (#48271f).
- **a { text-decoration:none; color:inherit; }** removes link underlines; **img { max-width:100%; }** stops images from overflowing their container.

Key Properties and Techniques Used

Property / technique	Used for	Example from the project
display:flex, justify-content, align-items, gap	Arranging items in a row and spacing them	Navigation bar, section headings, offer banner
display:grid, grid-template-columns	Dividing an area into columns	Hero (1fr 1fr), categories and products (5 columns), footer (4 columns)
repeat() and minmax(0,1fr)	Equal-width columns that cannot overflow	Product grid and gallery grid
padding, margin, gap	Space inside, outside and between elements	padding:35px 5% on sections
background, color	Backgrounds and text colours	Dark brown #3b2119 bar, peach #f9e1d3 hero
font-family, font-style, font-size	Typeface, italics and size	Georgia italic headings, Arial body text
clamp(min, preferred, max)	Text size that scales with the window	font-size:clamp(28px, 3.5vw, 43px) on the hero heading
border-radius	Rounded corners and circles	30px on buttons, 50% on category icons, 7px on cards
object-fit:cover, height	Crops photos to a fixed size without stretching	Hero, product, custom and gallery images
linear-gradient()	Smooth colour blend as a background	Offer banner: green to cream to peach at 120 degrees
letter-spacing, line-height	Space between letters and lines	Small capital labels; 1.8 line height on paragraphs
overflow:hidden	Clips content to rounded corners	Product cards and hero
:not(), > selectors	Targets specific elements only	.hero-content > p:not(.welcome)

Hover Effects and Transitions

Pseudo-class **:hover** applies a style only while the pointer is over an element, and **transition** makes the change gradual instead of sudden. Menu links turn pink, buttons darken and move up slightly (*transform: translateY(-2px)*), category icons grow (*scale(1.08)*), product cards lift and gain a soft shadow, and gallery photos zoom in slightly.

Responsive Design with Media Queries

@media rules change the layout when the screen is narrower than a given width:

Screen width	Changes made
Up to 900px (tablets)	Products and gallery change from 5 to 3 columns; footer from 4 to 2 columns; the hero text gets less padding.
Up to 600px (phones)	Navigation stacks vertically and is centred; hero image moves below the text; categories use 2 columns; products and gallery use 2 columns; custom cake section and footer become a single column; smaller image heights and heading size.

6. Output

When bakery.html is opened in a web browser (with bakery.css in the same folder), the page appears as a single scrolling web page. The screenshots below show the page from the top to the footer.

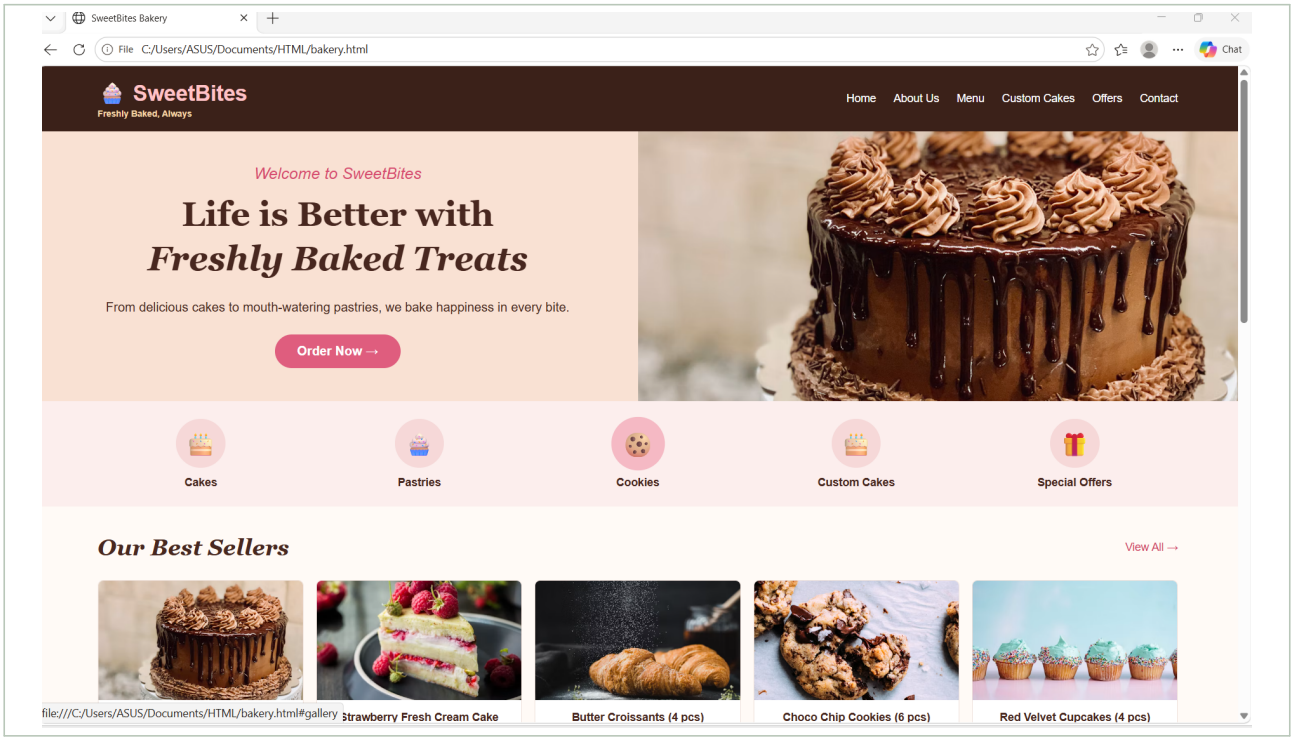

Figure 5: Output - navigation bar, hero section, categories and the start of Our Best Sellers

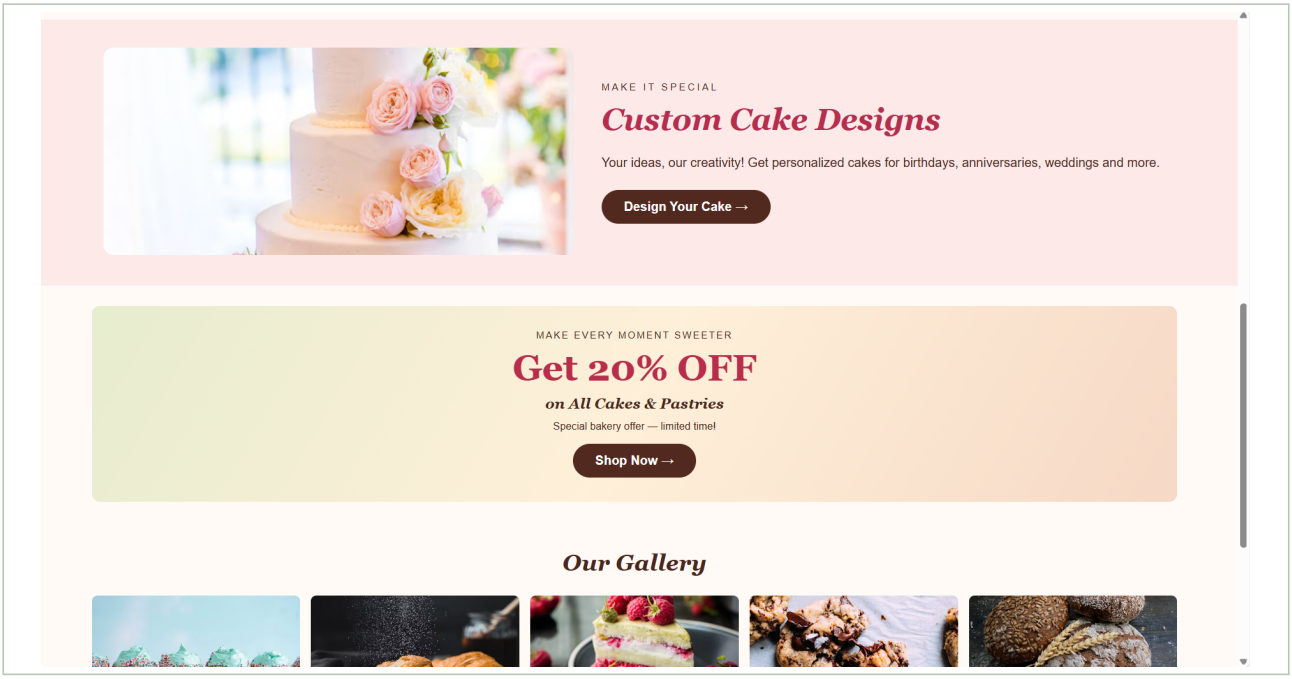

Figure 6: Output - Custom Cake Designs section, seasonal offer banner and the start of Our Gallery

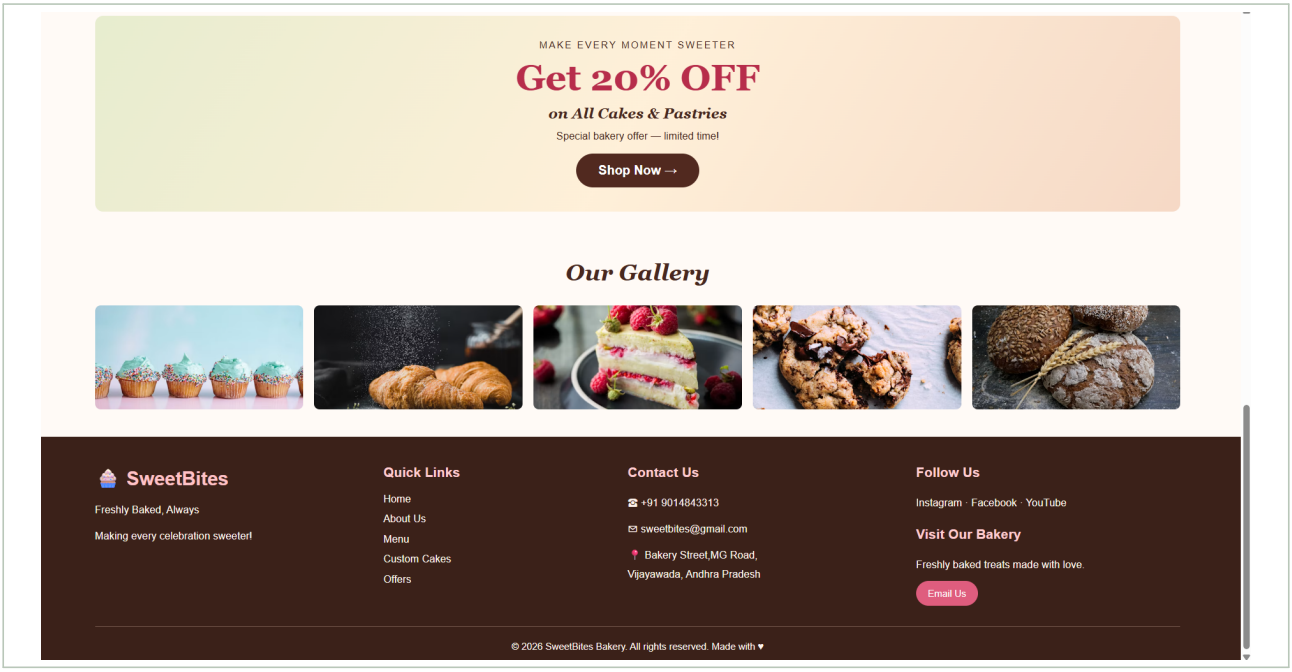

Figure 7: Output - offer banner, Our Gallery and the footer

Description of the Output

- **Navigation bar (Figure 5):** a dark brown bar with the pink SweetBites logo, a cupcake emoji and the tagline "Freshly Baked, Always" on the left, and six white links (Home, About Us, Menu, Custom Cakes, Offers, Contact) on the right.
- **Hero section (Figure 5):** split into two halves. On the left, a peach panel shows "Welcome to SweetBites" in pink italics, the heading "Life is Better with Freshly Baked Treats", a short sentence and a rounded pink "Order Now" button. On the right, a large photograph of a chocolate cake fills the half.

- **Categories (Figure 5):** a light-pink strip with five round icons labelled Cakes, Pastries, Cookies, Custom Cakes and Special Offers. The Cookies icon is darker because the mouse pointer was over it when the screenshot was taken, which shows the hover effect.
- **Our Best Sellers (Figure 5):** an italic heading with a "View All" link on the right and a row of five product cards with photos of a chocolate cake, a strawberry cake, croissants, cookies and cupcakes. Each card also has a price and an order button further down the page.
- **Custom Cake Designs (Figure 6):** a pink section with a rounded photo of a tiered cake decorated with roses on the left, and the label "MAKE IT SPECIAL", the italic heading, a description and a dark brown "Design Your Cake" button on the right.
- **Seasonal offer (Figures 6 and 7):** a rounded banner with a soft green-to-peach gradient, announcing "Get 20% OFF on All Cakes & Pastries" with a dark "Shop Now" button.
- **Our Gallery (Figures 6 and 7):** five equal photographs in a row: cupcakes, croissants, a fruit cake slice, cookies and bread.
- **Footer (Figure 7):** a dark brown area with four columns (SweetBites brand, Quick Links, Contact Us with phone, e-mail and address, and Follow Us with a pink "Email Us" button), and a centred copyright line at the bottom.

7. Conclusion

This activity resulted in a complete, attractive and responsive website for a bakery, built using HTML and an external CSS stylesheet. It showed how a page can be organised into clear sections, linked together with navigation, and styled so that every part (menu, hero, product cards, offer banner, gallery and footer) is easy to read and visually distinct. Using separate HTML and CSS files also demonstrated how real websites are organised.

Learning Outcomes

- Understood the structure of an HTML document, including DOCTYPE, the lang attribute, meta tags and the title.
- Used semantic tags (header, nav, section, footer), headings, paragraphs, images, links and div containers correctly.
- Linked an external CSS file to an HTML page and understood why separating content from style is useful.
- Used class and id attributes, and wrote CSS rules with class, descendant, child and pseudo-class selectors.
- Created layouts with Flexbox (navigation bar, headings, banners) and CSS Grid (hero, product cards, gallery, footer).
- Applied colours, fonts, spacing, rounded corners, shadows, gradients and object-fit to build a polished design.
- Added hover effects and transitions to improve the user experience.
- Made the page responsive using clamp(), flexible grids and media queries for tablets and phones.
- Used in-page navigation with ids, and a mailto link for e-mail enquiries.
- Wrote alt text for images to improve accessibility.

Overall, the activity strengthened problem-solving, attention to design detail and the ability to turn a written requirement into a working, responsive web page, which are skills that form the foundation for further study in web development and software engineering.
